Projects

FOOD-APP   Bengaluru
                                                                                               2024

Short summary of your work

- This food ordering web app uses **Java (JSP/Servlets)** for the backend and **HTML/CSS** for the frontend. Users can browse restaurants, add items to cart, choose delivery addresses, and place orders. Admins can manage menus and track orders. The UI is clean and inspired by platforms like Swiggy, with MySQL used for data management

TIC-TAC-TOE   Location
                                                                                         Date period

Short summary of your work

- This is a simple **Tic-Tac-Toe game** built using **JavaScript, HTML, and CSS**. It features a clean, responsive UI where two players take turns marking X and O on a 3x3 grid. The game detects wins, draws, and allows easy reset for replay
